
☒ Main Actors in a Hospital Management System

1. ☒👨⚕️ Doctor

Role: Provides medical care to patients

Key Functionalities:

- View patient records & medical history
 - Diagnose illnesses
 - Prescribe medications
 - Request lab tests
 - View test results
 - Manage appointments
 - Write discharge summaries
-

2. ☒👩⚕️ Nurse

Role: Assists doctors and cares for patients

Key Functionalities:

- Monitor patient vitals (BP, temperature, etc.)
 - Update patient records
 - Administer medications
 - Assist during procedures
 - Manage patient admissions/discharges
-

3. ☒☒ Receptionist / Front Desk Staff

Role: First point of contact for patients

Key Functionalities:

- Register new patients
 - Schedule and manage appointments
 - Handle patient check-in/check-out
 - Provide basic information
 - Manage queues
-

4. ☒ Administrator (Admin)

Role: System controller and manager

Key Functionalities:

- Manage users (doctors, nurses, staff)
 - Assign roles and permissions
 - Monitor system usage
 - Generate reports (financial, operational)
 - Configure system settings
-

5. ☒ Pharmacist

Role: Manages medications and prescriptions

Key Functionalities:

- View prescriptions from doctors
 - Dispense medicines
 - Manage drug inventory
 - Track expiry dates
 - Generate pharmacy bills
-

Role: Handles medical tests

Key Functionalities:

- Receive test requests
 - Conduct lab tests
 - Upload test results
 - Maintain lab records
-

7. 🏥 Patient

Role: Receives healthcare services

Key Functionalities:

- Register/login
 - Book appointments
 - View prescriptions & reports
 - View medical history
 - Make payments
 - Receive notifications
-

8. 💰 Billing/Accounts Staff

Role: Handles financial operations

Key Functionalities:

- Generate invoices
 - Process payments
 - Manage insurance claims
 - Track hospital revenue
 - Handle refunds
-

9. 🏢 Hospital Management (Owner/Manager)

Role: Oversees entire hospital operations

Key Functionalities:

- View analytics & dashboards
 - Monitor staff performance
 - Financial overview
 - Decision-making reports
-

⚙️ Optional / Advanced Actors

Depending on how advanced your system is:

📦 Inventory Manager

- Manage medical supplies
- Track stock levels
- Handle supplier orders

🚑 Emergency Staff

- Quick patient registration
- Emergency case handling

🏠 Insurance Company (External Actor)

- Verify patient insurance
 - Approve/reject claims
-

Instead of thinking only in actors, also think in **modules**:

- Patient Management
 - Appointment System
 - Electronic Medical Records (EMR)
 - Billing & Payments
 - Pharmacy Management
 - Laboratory Management
 - Inventory Management
 - Reporting & Analytics
-

☒ Simple System Flow (Example)

1. Patient books appointment
 2. Receptionist confirms
 3. Doctor examines patient
 4. Doctor prescribes medicine/tests
 5. Lab technician uploads results
 6. Pharmacist gives medicine
 7. Billing generates invoice
-
